

### Amendments to the Claims

1. (Currently amended) A porous hollow fiber, comprising a stretched single layer of a vinylidene fluoride resin having a weight-average molecular weight of at least  $3 \times 10^5$ , having a water permeation rate  $F$  ( $\text{m}^3/\text{m}^2 \cdot \text{day}$ ) measured at a pressure difference of 100 kPa and at a water temperature of  $25^\circ\text{C}$  in a range of test length  $L=0.2-0.8(\text{m})$  and expressed in a linear relationship with the test length  $L$  of:  $F=C \cdot L+F_0$  (formula 1) and satisfying requirements (a)-(d) shown below:

(a) ~~a~~ an average slope  $C$  (/day) of:  $-20 \leq C \leq 0$ ,

(b) an intercept (basic permeability)  $F_0$  ( $\text{m}^3/\text{m}^2 \cdot \text{day}$ ) of:  $F_0 \geq 30$ ,

(c) a relation between  $F_0$  ( $\text{m}^3/\text{m}^2 \cdot \text{day}$ ) and an average pore diameter  $P$  ( $\mu\text{m}$ ) according to half-dry method of  $F_0/P \geq 300$ , and

(d) an outer diameter of at most 3 mm;

wherein the vinylidene fluoride resin comprises 2-49 wt.% of a first vinylidene fluoride resin having a weight-average molecular weight ( $Mw_1$ ) of  $4 \times 10^5$ - $12 \times 10^5$  and 51-98 wt.% of a second vinylidene fluoride resin having a weight-average molecular weight ( $Mw_2$ ) of  $1.5 \times 10^5$ - $6 \times 10^5$  provided that the weight-average molecular weight ( $Mw_1$ ) of the first vinylidene fluoride resin and the weight-average molecular weight ( $Mw_2$ ) of the second vinylidene fluoride resin satisfy a ratio  $Mw_1/Mw_2$  of at least 1.2.

2. (Original) A porous hollow fiber according to claim 1, further satisfying a relationship of :  $F_0/D_i^4 \leq 75$  between the basic permeability  $F_0$  ( $\text{m}^3/\text{m}^2 \cdot \text{day}$ ) and an inner diameter  $D_i$  (mm) of the hollow fiber.

3. (Previously presented) A porous hollow fiber according to claim 1, comprising a vinylidene fluoride resin having a weight-average molecular weight of at least  $4 \times 10^5$ .

4. (Previously presented) A porous hollow fiber according to claim 1, comprising a vinylidene fluoride resin having a ratio  $Mw/Mn$  of at least 2.0 between a weight-average molecular weight ( $Mw$ ) and a number-average molecular weight ( $Mn$ ) thereof.

5. (Cancelled)

6. (Previously presented) A porous hollow fiber according to claim 1, having an inner diameter of 0.8-2.98 mm and a wall thickness of 0.01-0.4 mm.

7. (Currently amended) A process for producing a porous hollow fiber of vinylidene fluoride resin according to claim 1, comprising : providing a composition by adding, to 100 wt. parts of a vinylidene fluoride resin having a weight-average molecular weight of at least  $3 \times 10^5$ , a plasticizer and a good solvent for vinylidene fluoride resin in a total amount of 100-300 wt. parts so that the good solvent occupies 8-22 wt.% therein ; melt-extruding the composition into a form of hollow fiber; introducing the hollow fiber into an inert liquid while injecting an inert gas into a hollow part thereof to cool and solidify the hollow fiber; ~~and~~ extracting the plasticizer to recover a porous hollow fiber; and stretching the hollow fiber before or after the extraction of the plasticizer,

wherein the vinylidene fluoride resin comprises 2-49 wt.% of a first vinylidene fluoride resin having a weight-average molecular weight (Mw1) of  $4 \times 10^5$ - $12 \times 10^5$  and 51-98 wt.% of a second vinylidene fluoride resin having a weight-average molecular weight (Mw2) of  $1.5 \times 10^5$ - $6 \times 10^5$  provided that the weight-average molecular weight (Mw1) of the first vinylidene fluoride resin and the weight-average molecular weight (Mw2) of the second vinylidene fluoride resin satisfy a ratio Mw1/Mw2 of at least 1.2.

8. (Cancelled)
